

# SAVEONENERGY MONITORING AND TARGETING

## EFFECTIVELY TRACK YOUR ENERGY USAGE AND SET REDUCTION GOALS!

### WHAT?

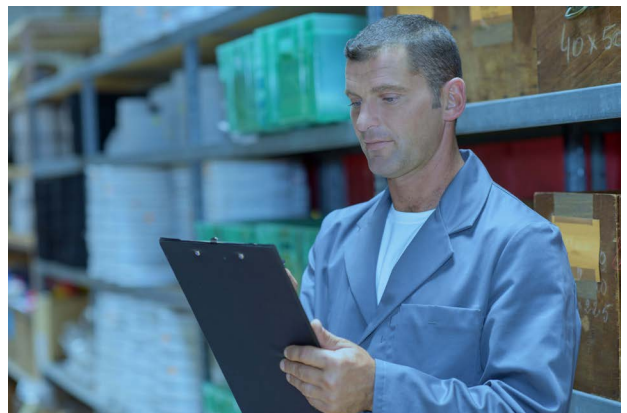

The Monitoring and Targeting program provides incentives for the installation of metering equipment in your facility. Metering equipment will help you understand your current energy consumption and identify opportunities for future energy reduction. You will also be able to see the impact of your reduction initiatives instantly. This program typically results in improving overall energy-efficiency by 5 to 10%.

Your electricity provider will cover up to 80% of the cost of purchasing and installing a monitoring and targeting system up to a cap of \$75,000 per site.

### WHO?

To be eligible for this program your facility must meet the following criteria:

- Facility must have a resident energy manager to ensure monitoring and targeting system is managed;
- Facility must demonstrate a 0.2 MW in peak demand savings and  $0.2 \text{ MW} \times \text{Facility Load Factor} \times 8,760$  hours in energy savings by the end of the second year in operation;
- Participant must commit to implementing projects with less than a one-year payback period;
- Participant must agree to provide annual reports of opportunities implemented as a result of the monitoring and targeting system for a five-year period.

### HOW?

- Contact your electricity provider to learn more about participating in the Monitoring and Targeting program.

The complete list of program rules can be found [here!](#)
