

Energy Efficiency Programs: Commercial

Commercial buildings typically consume energy through lighting systems, office equipment, air conditioning and heating. Building owners and facility managers are increasingly utilizing energy efficiency incentives and technologies in new and existing commercial buildings, to save energy costs and improve their bottom line. Here are a number of incentive programs that can help commercial organizations improve energy efficiency programs and reduce energy costs.

ELECTRICITY PROGRAMS

Audit Funding

Covers up to 50% of the cost of an energy audit

Retrofit

Upgrade your equipment and save on energy costs

Training & Support

Develop and build your energy knowledge and expertise

High Performance New Construction

Be energy efficient from the start

Existing Building Commissioning

Save by improving your chilled water system

Business Refrigeration Incentives

Turn-key solution for your commercial refrigeration needs

NATURAL GAS PROGRAMS

Equipment Incentive Program

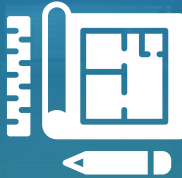

Funding for efficient natural gas and energy-related equipment

Custom Engineering Incentive Program

Identify and implement energy-reducing measures at your workplace today

Commercial Savings by Design

Integrate natural gas efficiency into the design of your next building project

Comprehensive Energy Management

Structured energy management support to optimize performance and productivity

OTHER PROGRAMS TO CONSIDER

Process and Systems

Multi-site Customers
